

METHODS AND APPARATUS FOR IMPLEMENTING A SPEED SENSITIVE MOBILE ROUTER

ABSTRACT OF THE DISCLOSURE

5

Methods and apparatus are disclosed for implementing a speed sensitive mobile network device (e.g., Mobile Router). The speed of the mobile network device is detected. The values of one or more operating characteristics of one or more interfaces of the mobile network device are ascertained, where the values correspond to the speed of the mobile network device. One of the interfaces having a desired set of values of the operating characteristics at the speed of the mobile network device is then selected.
